

Pull Latch Handle

1-068

Advantages

- The pull latch handle is used by the 19" rack industry for locking insertions.
- The completely pre-assembled unit is fastened by a countersunk screw M4.
- When inserting the pull latch, the free running slam hook slides into the cutout of the door to keep the latch from rotating. (3.)
- Pulling on the handle will unlock the drawer, enabling it to be pulled out. (4.)
- RH and LH application.

Material

- **Housing and handle:** zinc die, matte chrome plated
- **Spring for insert:** spring steel
- **Hook:** sintered steel, zinc plated

Remarks

(S) Door-thickness max. 5mm

1. cutout handle
2. alternative cutouts for locking hole

The countersunk screw is not included.
